Additional information

Project name

The Neuroimaging and Genetics of Emotion Perception in Schizophrenia

Project description

The focus of this PhD is emotion perception in schizophrenia and the influence of prior expectations. fMRI is used to find out which functional networks play a role in impaired emotion perception. The impact of schizophrenia genes on emotion perception and underlying brain pathways is also being investigated.

Dataset name

Example emotion videos used in investigation of emotion perception in schizophrenia.

Dataset description

Videos used in the Dynamic Emotion Perception task. Two example videos from each emotion category (angry, happy and neutral).
